

Pi-Theory: analytical method of determining the values of fundamental physical constants

Valery B. Smolensky

Abstract: the article presents the author developed an original analytical method for determining the values of the fundamental physical constants (FPC). Given a finite formulas and the exact results of theoretical calculations 27 constants, including the fine-structure constant, the electron mass, Newton's gravitational constant, the Boltzmann constant and the molar gas constant. Presents a table comparing the results of calculations with the data CODATA 2010.

Keywords: anomaly of the magnetic moment, electron, muon, Planck length, Boltzmann constant

1. Introduction

Pi-Theory of the fundamental physical constants (Pi-Theory) assumes that physical reality is a single parametric spatio-temporal is the Medium.

If in the text of the article the name of the parameter has a subscript “ π ” it is, firstly, means that this is parameter Pi-Theory, and secondly that this parameter has a theoretical value that can be used instead of the true parameter value. A scalar parameter – it is a numeric parameter. Pi-Theory has only one free parameter is a scalar parameter of the Medium p_{fr} .

All resulting in Pi-Theory results - this is are solutions of algebraic equations.

In PI-Theory is used Unitary system of units of measurement of dimensional parameters:

$$u_{\pi l} = 1.0[\text{sm}], u_{\pi m} = 1.0[\text{g}], u_{\pi t} = 1.0[\text{s}], u_{\pi T} = 1.0[\text{K}].$$

2. Final formulas

Table 1. Presents formulas for determining the values of the numerical parameters.

N	The name of the parameter and the formula Pi-Theory
1	Scalar parameter of the Medium p_{fr} (free parameter): $p_{fr} = \pi$.
2	Scalar parameter of the elementary charge $\alpha_{\pi 0}$. Is the real root of the equation $\varphi_{\pi 0}^3 \cdot \pi^2 \cdot \alpha_{\pi 0} \cdot \bar{\beta}_{\pi} = (1 + \Delta y_{\pi 0} \cdot \alpha_{\pi 0})^3,$ where: $\varphi_{\pi 0} = \sqrt{2} \cdot \pi$; $\Delta y_{\pi 0} = \sqrt[4]{2} \cdot \pi$; $\bar{\beta}_{\pi} = 1 + \bar{\beta}_{\pi 0}$; $\bar{\beta}_{\pi 0} = \alpha_{\pi 0} / \varphi_{\pi 0}$.
3	Scalar structure parameter of space-time $f_{\pi s 0}$: $f_{\pi s 0} = \alpha_{\pi 0} \cdot \bar{\beta}_{\pi}.$
4	Constant parametric bias $\Delta y_{\pi e}$: $\Delta y_{\pi e} = \frac{\Delta_{\pi x}}{\Delta y_{\pi 0}^3}.$
5	Coefficient $\Delta_{\pi x}$. Is determined from the equation $\frac{1}{\varphi_{\pi 0}} \cdot \alpha_{\pi x 1, 2}^2 + \alpha_{\pi x 1, 2} - \bar{\beta}_{\pi} = 0$ in the form $\Delta_{\pi x} = \frac{\alpha_{\pi x 1}}{\alpha_{\pi x 2}}$.
6	Constant parametric connection $\beta_{\pi e}$: $\beta_{\pi e} = 1 + \beta_{\pi 0 e}; \beta_{\pi 0 e} = \frac{\bar{\beta}_{\pi 0}}{\beta_{\pi}^3}.$
7	Scalar parameter of the elementary charge $\alpha_{\pi e}$. The real root of the equation $\varphi_{\pi 0}^3 \cdot \pi^2 \cdot \alpha_{\pi e} \cdot \beta_{\pi e} = (1 + \Delta y_{\pi e} \cdot \alpha_{\pi e})^3.$
8	Scalar structure parameter of space-time $f_{\pi s e}$:

N The name of the parameter and the formula Pi-Theory

9 Scalar structure parameter of space-time $\vec{f}_{\pi s}$:

$$\vec{f}_{\pi s} = \alpha_{\pi e} \cdot \beta_{\pi e} \cdot f_{\pi s0}^3$$

10 Scalar structure parameter of space-time $f_{\pi s}$:

$$f_{\pi s} = \sqrt[3]{\frac{f_{\pi se}^4}{f_{\pi s0}}}$$

11 Coefficient of skewness k_{π} :

$$k_{\pi} = \sqrt[4]{\frac{\vec{f}_{\pi s}}{f_{\pi s}}}$$

12 Coefficient of absolute stability $k_{\pi st}$:

$$k_{\pi st} = k_{\pi}^9$$

13 Scalar parameter of the elementary charge α_{π} :

$$\alpha_{\pi} = \frac{\alpha_{\pi e}}{k_{\pi}}$$

14 Constant parametric connection β_{π} :

$$\beta_{\pi} = \frac{f_{\pi s}}{\alpha_{\pi}}$$

15 Constant scale invariance ψ_{π} :

$$\psi_{\pi} = k_{\pi \psi} \cdot \psi_{\pi 0}; k_{\pi \psi} = \frac{2 \cdot \alpha_{\pi}^6}{\sqrt{\pi} \cdot f_{\pi s}^6}, \psi_{\pi 0} = 4 \cdot \pi^6 \cdot f_{\pi s}^9$$

16 Constant parametric bias Δy_{π} . Determined by direct calculation from the equation

$$\varphi_{\pi 0}^3 \cdot \pi^2 \cdot f_{\pi s} = (1 + \Delta y_{\pi} \cdot \alpha_{\pi})^3$$

17 Constant of the strong interaction $\alpha_{\pi s}$. The real root of the equation

$$\varphi_{\pi 0}^3 \cdot \pi^2 \cdot \alpha_{\pi s} \cdot \beta_{\pi} = (1 + \Delta y_{\pi} \cdot \alpha_{\pi s})^3$$

18 Coefficient of the charge asymmetry $k_{\pi q}$:

$$k_{\pi q} = \frac{\alpha_{\pi x}}{\alpha_{\pi y}}$$

where the coefficients $\alpha_{\pi x}$ and $\alpha_{\pi y}$ are real roots of the equations

$$\varphi_{\pi 0}^3 \cdot \pi^2 \cdot \alpha_{\pi x} \cdot \bar{\beta}_{\pi} = (1 + \Delta y_{\pi 0} \cdot \alpha_{\pi x})^3 \text{ and } \varphi_{\pi 0}^3 \cdot \pi^2 \cdot \alpha_{\pi y} \cdot \beta_{\pi e} = (1 + \Delta y_{\pi e} \cdot \alpha_{\pi y})^3 \text{ respectively.}$$

19 Anomaly of the magnetic moment $a_{\pi ex}$. Determined by direct calculation from the equation

$$(1 + \Delta y_{\pi e} \cdot \alpha_{\pi e})^3 = k_{\pi q}^4 \cdot (1 + \Delta y_{\pi e} \cdot a_{\pi ex})^3$$

20 Electromagnetic the constant of asymmetry $\Delta_{\pi a}$:

$$\Delta_{\pi a} = \alpha_{\pi e} - a_{\pi ex}$$

21 Anomaly of the magnetic moment of the electron $a_{\pi e}$:

$$a_{\pi e} = \alpha_{\pi} - \Delta_{\pi a}$$

22 Anomaly of the magnetic moment $a_{\pi \mu x}$:

$$a_{\pi \mu x} = \frac{f_{\pi se}^3}{a_{\pi ex}^2}$$

N The name of the parameter and the formula Pi-Theory

23 Anomaly of the magnetic moment of the muon $a_{\pi\mu}$:

$$a_{\pi\mu} = a_{\pi\mu x} \cdot \left(\sqrt[4]{(1 + \Delta y_{\pi} \cdot \alpha_{\pi})^3} \right)^3 \cdot k_{\pi}^4.$$

24 Coefficient electroweak of asymmetry $k_{\pi w}$:

$$k_{\pi w} = k_{\pi} \cdot \left(\frac{1 + f_{\pi se}}{1 + f_{\pi s}} \right)^2 \cdot \left[1 + \left(-\frac{(\pi - 1)^2}{\pi} \right)^4 \cdot \frac{4}{\varphi_{\pi 0}} \cdot f_{\pi s}^4 \right].$$

25 Scalar parameter weak interaction $\alpha_{\pi w}$:

$$\alpha_{\pi w} = k_{\pi w}^3 - 1.$$

26 Electron-proton mass ratio $r_{\pi ep}$:

$$r_{\pi ep} = \frac{m_{\pi e}}{m_{\pi p}} = \left[\frac{f_{\pi s} \cdot (1 + \Delta y_{\pi} \cdot \alpha_{\pi})^3}{\sqrt[3]{\pi^2}} \right] \cdot \left(1 - \frac{\alpha_{\pi}}{\alpha_{\pi s}} \right) \cdot k_{\pi st}.$$

27 Electron-neutron mass ratio $r_{\pi en}$:

$$r_{\pi en} = \frac{m_{\pi e}}{m_{\pi n}} = \left[\frac{f_{\pi s} \cdot (1 + \Delta y_{\pi} \cdot \alpha_{\pi})^3}{\sqrt[3]{\pi^2}} \right] \cdot \left(\frac{a_{\pi e} + \alpha_{\pi w}}{a_{\pi e} + \Delta_{\pi a}} \right).$$

28 Neutron-proton mass ratio $r_{\pi np}$:

$$r_{\pi np} = \frac{m_{\pi n}}{m_{\pi p}} = \left(1 - \frac{\alpha_{\pi}}{\alpha_{\pi s}} \right) \cdot \left(\frac{a_{\pi e} + \Delta_{\pi a}}{a_{\pi e} + \alpha_{\pi w}} \right) \cdot k_{\pi st}.$$

29 Proton-neutron magnetic moment ratio $r_{\pi\mu, pn}$:

$$r_{\pi\mu, pn} = \frac{\mu_{\pi p}}{\mu_{\pi n}} = \left[-\frac{(\pi - 1)^2}{\pi} \right] \cdot \frac{(1 + \alpha_{\pi w})^2}{(1 + \Delta_{\pi a})^2}.$$

30 Muon-nuclear magneton magnetic moment ratio $r_{\pi\mu N}$:

$$r_{\pi\mu N} = \frac{\mu_{\pi\mu}}{\mu_{\pi N}} = \left(-\frac{(2 \cdot \pi - 1)^2}{\pi} \right) \cdot \left(\sqrt[4]{\frac{f_{\pi se}}{f_{\pi s}}} \right)^9 \cdot \left(1 - \frac{\alpha_{\pi}}{\alpha_{\pi s}} \right)^9.$$

31 Muon-proton mass ratio $r_{\pi\mu p}$:

$$r_{\pi\mu p} = \frac{m_{\pi\mu}}{m_{\pi p}} = (1 + a_{\pi\mu}) \cdot \frac{\mu_{\pi N}}{|\mu_{\pi\mu}|}.$$

Table 2. Formulas are presented for determining the values of FPC.

N	The name of the parameter	Symbol	Formula	Unit SGS
1	Compton wavelength	$\lambda_{\pi C}$	$\lambda_{\pi C} = \frac{2 \cdot \pi^2 \cdot \alpha_{\pi}^2}{R_{\pi 0}}$	sm
2	Bohr radius	$a_{\pi 0}$	$a_{\pi 0} = \frac{\alpha_{\pi}}{2 \cdot R_{\pi 0}}$	sm
3	electron mass*	$m_{\pi e}$	$m_{\pi e} = \pi^2 \cdot f_{\pi s}^3 \cdot \lambda_{\pi C}^2 \cdot u_{\pi p s}$	g
4	quantum of circulation	$q_{\pi c}$	$q_{\pi c} = \lambda_{\pi C} \cdot c$	$\text{sm}^2 \text{s}^{-1}$

4. Conclusions

From comparison of the data presented in table 5, it follows that proposed in this paper analytical method suitable for the theoretical definition of FPC.

Note that with fixed values of the speed of light in vacuum, the temperature of the triple point of water 273.16 K and of the temperature of the melting point of ice is 273.15 K, the accuracy of the determination of the numerical values of FPC is determined only by the accuracy of the numerical value of the Rydberg constant. This circumstance, according to the author of this article, is the undoubted advantage of the proposed method theoretical definitions of FPC.
